About this guide

A guide to the NavGurukul **PnC ELC Platform** (Employee Life Cycle) for the people who use it: the People & Culture (PnC) team, the Finance team, leadership, managers and employees.

Read this before you start using the site. You don't need any technical knowledge for it.

> **Scope.** This guide describes the platform as built at version **2.04.00** (October 2026). Where a screen is still unfinished, or shows sample data, the guide says so. Known limitations collects these in one place.

What the platform is

The ELC Platform is NavGurukul's single place to run every stage of a person's time with us:

```
Candidate ──► Pre-joiner ──► Employee (probation) ──► Confirmed employee ──► Exit
  offer       documents,       Day 1, check-ins,         appraisals          resignation,
  letters     signing          confirmation review                           clearances, F&F
```

Stage	What the platform does
Onboarding	Creates the offer, generates letters, sends the candidate a portal link, collects documents and signatures, and lets PnC verify everything before the person becomes an employee.
Employee records	Keeps the directory of everyone who works here, with reporting lines, teams and documents.
Confirmation	Runs the probation review: the employee's self-reflection, peer feedback, the manager's review, a meeting, and a decision PnC accepts.
Appraisals	Runs the twice-yearly performance reviews in the same way.
Offboarding	Handles a resignation, the notice period, departmental clearances (No Dues), full-and-final settlement and the relieving letter.
Payroll	*Planned, not yet built.* See the Finance guide.

Reading order

Everybody should read the first three chapters. After that, read the chapters for your team.

#	Chapter	Who should read it
1	Getting started: signing in, the layout, the sidebar	**Everyone**

#	Chapter	Who should read it
2	Roles and access: who can see what, and why	**Everyone**
3	Where to go to do what: "I want to … → go here"	**Everyone**
4	My Workspace: Dashboard, My Profile, My Forms, My Reviews, My Team	Everyone, especially managers
5	Onboarding and letters	PnC
6	Employee directory and profiles	PnC, Finance, leadership
7	Confirmations, appraisals and reviews	PnC, managers, leadership
8	Offboarding and exits	PnC, Finance
9	Reports and audit trail	PnC Admin, Finance Admin, leadership
10	Administration: users, settings, emails, data, forms	PnC Admin, Platform team
11	Finance guide: what Finance does today, and payroll plans	**Finance**
12	Data privacy and the vault	PnC, Finance, leadership
13	Known limitations	PnC, Finance
14	Glossary and FAQ	Everyone

Quick paths

- **PnC team:** 1 → 2 → 3 → 5 → 6 → 7 → 8 → 12 → 13
- **Finance team:** 1 → 2 → 3 → 11 → 8 (F&F) → 6 → 12 → 13
- **Leadership:** 1 → 2 → 3 → 9 → 7
- **Managers:** 1 → 3 → 4 → 7
- **Employees:** 1 → 4

Getting help

- **Something looks wrong, or you can't reach a screen you need:** ask a PnC Admin. Access is set by role, and only certain people can change roles (see Roles and access).
- **A setting needs changing:** ask a Platform Admin.
- **Candidates** with questions about their portal write to the PnC mailbox shown on their portal page.

1. Getting started

> **In this chapter.** How to sign in, how the screen is laid out, what each sidebar group is for, and what happens when you open a page your role doesn't cover. Read it once before your first login. It takes five minutes, and it explains most of the "why can't I see…?" questions people ask.

Signing in

1. Open the platform and click **Sign in with Google**.
2. Choose your **@navgurukul.org** Google account.

There is no password of its own. Personal Gmail and other accounts are turned away with: *"Sign in with your @navgurukul.org Google account. Personal accounts cannot use the platform."*

If you followed a link to a particular page, you land on that page after signing in. Otherwise you land on the **Dashboard**.

First time? If nobody has given you a role yet, you sign in as an **Employee**. If you need more (PnC, Finance, leadership), ask the admin of your team to give you the right role. See Roles and access.

Candidates and new joiners do not sign in. They use the personal portal link from their invitation email. If one of them signs in with Google anyway, they see a notice saying there is no dashboard for them and to use their invitation link.

The layout

The header (top bar)

Item	What it does
☰	Collapses or expands the sidebar.

Item	What it does
Breadcrumb	Shows where you are, e.g. *Dashboard › Employees*.
Role View Mode	Only for admins: lets you see the site as a lower role would. See Viewing as another role.
☀ / ☾	Switches between light and dark mode.
Your name ▾	Shows your name and email. **Profile** opens My Profile. **Log out** signs you out. (*Notifications* is not built yet.)

The sidebar

The sidebar is grouped by what you are trying to do. **You only see the items your role can open.** An employee sees a short sidebar; a PnC Admin sees most of it.

Group	Items	What it's for
(top)	**Dashboard**	Your home page: things waiting on you, and key numbers.
My Workspace	My Profile · My Forms · My Reviews · My Team	Things about *you*: your profile, forms you've been asked to fill, your reviews, and the people who report to you.
People	Onboarding (Overview · Candidates · New Joiners) · Employees · Confirmations · Appraisals · Reviews · Offboarding · Letters (Issued Letters · Templates · Signatories)	The employee life cycle, in the order it happens.
Insights	Reports	Organisation-wide numbers and CSV exports.
Administration	Users & Roles · Settings · Email Center · Data Management · Form Builder · Audit Trail	How the platform itself is run.

My Team only appears once at least one person reports to you.

The version number at the bottom of the sidebar shows which release you're on. The **Changelog** page (`/changelog`) lists what changed in each release.

If you open a page you're not allowed to see

You are taken back to the Dashboard with the message *"That page isn't part of your role, so you've been brought back to your dashboard."* Nothing is wrong. Your role just doesn't include that screen. If you think it should, ask your team's admin.

Viewing as another role

Admins can check what a colleague with a smaller role would see, using **Role View Mode** in the header.

- **Super Admin** can view as any role.

- **PnC Admin** can view as **PnC Ops**, **Fin Admin** as **Fin Ops**, and **Platform Admin** as **Platform Ops**.
- Other roles don't get the switcher.

Viewing as a role only ever **narrows** what you see. It never shows you more than your own role allows. Your choice lasts 24 hours; pick **Original Role** to switch back.

Addresses worth bookmarking

Page	Address
Dashboard	`/`
My Forms	`/my-forms`
My Reviews	`/my-reviews`
Candidates (PnC)	`/onboarding/candidate`
Employees	`/employees`
Reviews dashboard (PnC)	`/reviews`
Offboarding	`/offboarding`
Reports	`/reports`

Your first login: a checklist

1. Sign in with your **@navgurukul.org** Google account.
2. Look at the sidebar. Does it match what your job needs? Compare it with the table in Roles and access. If something is missing, ask your team's admin. Don't share another person's login.
3. Open **My Profile**. Check your joining date, team and reporting manager. Tell PnC if anything is wrong. Reviews are sent to the manager on record, so a wrong manager means your review goes to the wrong person.
4. Open **My Forms**. Anything waiting? Forms have due dates, and reminders follow.
5. Bookmark the Dashboard. It's the quickest way to see what's waiting on you.

Good practice

- **Sign out on shared computers** (*Your name ▾ › Log out*).
- **Don't screenshot or forward** pages that show salary, bank, ID or feedback data.
- If a page looks wrong or empty, **refresh first**. Then check Known limitations before reporting it.

2. Roles and access

> **In this chapter.** The twelve roles, what each can see and change, which screens each one gets, and who can hand out roles. The guiding idea: **you see what your job needs and nothing more.** That's why two people on the same team may see different sidebars. It isn't a bug.

Everything you can see and do on the platform comes from your **role**. Each person has exactly one. This chapter explains the roles in plain words. The official version is `docs/rbac.md`.

The basic idea

The platform holds two kinds of data:

- **General data:** name, team, email, joining date, manager, status. Most staff roles can see some of this.
- **Sensitive data:** salary, bank details, ID numbers (Aadhaar, PAN) and what people wrote about each other in reviews. Only a few roles can see it. Much of it lives in a separate, locked store called the **vault** (see Data privacy and the vault).

Seeing data your role doesn't allow counts as a defect, **even for the developers**. If you can see something you shouldn't, tell a PnC Admin.

The roles

Team	Role	In one line
Owner	**Super Admin**	Can see and do everything. Held by the platform owner.
PnC	**PnC Admin**	Runs People & Culture: makes offers (enters CTC), issues letters, closes reviews, sees salary.
PnC	**PnC Ops**	Runs the day-to-day pipeline: invites candidates, verifies documents, chases reviews, runs exits. **No salary.**
Finance	**Fin Admin**	Sees the directory and salary/bank data, settles full-and-final, reads letters.
Finance	**Fin Ops**	Sees the directory; will prepare payroll. Read-only today.
Leadership	**Exec View**	Read-only view of the directory, reviews and reports.
Platform	**Platform Admin**	Looks after settings, templates, emails and forms. **Sees no personal data.**
Platform	**Platform Ops**	Read-only version of Platform Admin.
Line	**Manager**	Sees and reviews their own team.
Everyone	**Employee**	Sees their own profile, forms and reviews.

Team	Role	In one line
Onboarding	**Pre-joiner** / **Candidate**	Use only the onboarding portal link. They have no dashboard.

> **Note on managers.** The platform is meant to make someone a *Manager* automatically when people report to them, but that isn't switched on yet. Most line managers are therefore stored as **Employee**. That's fine: they still see **My Team** and **My Reviews** for their reports. They just can't open the org-wide Confirmations and Appraisals screens.

What each role can see

`Edit` = read and change · `View` = read only · `Own` = only your own record · `—` = nothing.

Role	General (name, team, email)	Identity & documents (phone, ID)	Bank	Salary	Performance (feedback, decisions)	Config (templates, settings)
Super Admin	Edit	Edit	Edit	Edit	Edit	Edit
PnC Admin	Edit	Edit	View	Edit	Edit	View
PnC Ops	Edit	Edit	—	—	Status only	—
Fin Admin	View	—	Edit	Edit	Outcomes only	—
Fin Ops	View	—	View	View (payroll export)	—	—
Exec View	View	—	—	View	View	—
Platform Admin	View	—	—	—	—	Edit
Platform Ops	View	—	—	—	—	View
Manager	Own team	—	—	—	Own team	—
Employee	Own	Own (view)	Own (view)	Own, through letters	Own outcomes	—

Which screens each role gets

Who can give someone a role

Roles are changed in **Administration › Users & Roles**.

- **Super Admin** can give any role.
- **PnC Admin** can give **PnC Admin** or **PnC Ops**, and nothing else.
- **Fin Admin** can give **Fin Admin** or **Fin Ops**, and nothing else.
- **Platform Admin** can give **Platform Ops** only.
- **Exec View** and **Platform Admin** can only be given by Super Admin.
- **Nobody can change their own role.**
- **Manager, Employee, Pre-joiner and Candidate** are set by the system, never by hand.

A role in the platform doesn't give access to the vault. Vault access is a separate invitation. See Data privacy and the vault.

A candidate's role over time

A person's role follows their status automatically:

Status	Role
Offer pending	Candidate
Offer accepted → Documents submitted → Documents verified	Pre-joiner

Status	Role
Active (joined) → Confirmed	Employee
Withdrawn (declined, offer pulled, or no-show)	none: access ends the same day; the record is kept

If someone also holds a team role (e.g. an employee who is also PnC Admin), the team role wins.

Why access works this way

- **Least access by default.** When roles were introduced, everyone moved to the *lower* of two possible roles (e.g. the old "PnC" became PnC Ops, not PnC Admin), and admins then promoted the few who needed more. If you lost access you used to have, this is why. Ask your team's admin.
- **Teams staff themselves.** PnC Admin staffs PnC; Fin Admin staffs Finance. Neither can grant the other's roles, so no one team can quietly widen its own sight of the other's data.
- **The platform team builds the system but can't see sensitive data.** Platform Admin manages settings and templates but sees no salary, bank, ID or feedback data, and can't grant itself more.
- **Viewing as another role only narrows.** An admin checking what PnC Ops sees never gains anything by doing so.

Worked example: a new PnC Ops joins

1. They sign in for the first time and land as **Employee**: Dashboard, My Profile, My Forms only.
2. A PnC Admin opens **Users & Roles**, finds them, clicks ⋮ › **Edit Allocations**, sets **PnC Ops** and team **PnC**, writes *"Joined PnC operations"* as the reason, and saves.
3. On their next page load they see **People** (Onboarding, Employees, Confirmations, Reviews, Offboarding). They still don't see Letters, Reports or salary figures, because PnC Ops has no salary access.
4. They don't need a vault invitation: PnC Ops works only with data that hasn't been sealed yet.

3. Where to go to do what

> **In this chapter.** A lookup table. Find what you're trying to do, follow the path in the *Go to* column, and check the *Who* column. If your role isn't listed, the action belongs to someone else. The last column tells you who to ask.
>
> Paths are written as **Sidebar group › Item** then *button or tab*. For example, **People › Offboarding** → *Manage Case* means: open *Offboarding* under *People* in the sidebar, then click *Manage Case*.

Find what you want to do, then go to the place listed. The **Who** column lists the roles that can do it.

Everyone

I want to…	Go to	Who
See what's waiting on me	**Dashboard** → *Waiting on you*	All staff
Fill in a form I've been sent (self-reflection, peer feedback, manager review)	**My Workspace › My Forms**	All staff
See where my confirmation or appraisal review stands	**My Workspace › My Reviews**	All staff
Nominate peers for my review	**My Reviews** → open the review → *Save nominations*	All staff
See my joining date, manager and confirmation status	**My Workspace › My Profile**	All staff
See what changed in the latest release	`/changelog`	All staff
Switch dark mode on or off	☀/☾ in the header	All staff

Managers

I want to…	Go to	Who
See the people who report to me	**My Workspace › My Team**	Anyone with reports
Fill in the manager review for a report	**My Reviews** → *My team's reviews* → open → *Fill in the manager review*	Their manager
Book or move a report's review meeting	**My Reviews** → open the review → *Review meeting*	Their manager

I want to…	Go to	Who
Record the outcome after the meeting	**My Reviews** → open the review → *Decision* → *Record decision and send to PnC*	Their manager

PnC

I want to…	Go to	Who
Make an offer to a new candidate	**People › Onboarding › Candidates** → *Create Candidate*	PnC Admin, Super Admin
Send or resend a candidate's portal link	**Candidates** → ⋮ → *Send / Resend Invitation Email*	PnC Admin, PnC Ops
Verify a candidate's documents	**Candidates** → *Review* → **Verification** tab	PnC Admin, PnC Ops
Ask a candidate to fix something	Review page → *Request Changes* (or *Reject* a single document)	PnC Admin, PnC Ops
Approve a candidate and make them an employee	Review page → *Approve Dossier* → *Create Official Account*	PnC Admin, PnC Ops
Track Day-1, laptop, POSH and 30/60-day check-ins	**Onboarding › New Joiners**	PnC Admin, PnC Ops
Edit an offer/appointment letter template	**People › Letters › Templates**	PnC Admin
Change who signs letters	**People › Letters › Signatories**	PnC Admin
Find a letter already issued	**People › Letters › Issued Letters**	PnC Admin, Fin Admin
Change someone's reporting manager	**Data Management › Import Employee Data**: upload a CSV with their `email` and new `manager_email` (see Administration)	PnC Admin, Super Admin
Edit an employee's personal details	**Employees** → *View* → *Save Profile Changes*	PnC Admin, PnC Ops
Upload a document to an employee's file	**Employees** → *Documents*	PnC Admin, PnC Ops
See every confirmation/appraisal review in progress	**People › Reviews**	PnC Admin, PnC Ops, Exec View
Start a review that is due but hasn't opened	**Reviews** → *Due, not started* → *Start now*	PnC Admin, PnC Ops
Chase people who haven't responded	**Reviews** → *Remind all pending*, or the review → *Remind*	PnC Admin, PnC Ops
Add or withdraw a peer reviewer	**Reviews** → open the review	PnC Admin, PnC Ops

I want to...	Go to	Who
Accept a manager's decision, or send it back	**Reviews** → open the review → *Accept and close* / *Send back to the manager*	PnC Admin
Record a resignation	**People › Offboarding** → *Initiate Resignation*	PnC Admin, PnC Ops
Run an exit (checklist, assets, No Dues)	**Offboarding** → *Manage Case*	PnC Admin, PnC Ops
Give a colleague a PnC role	**Administration › Users & Roles**	PnC Admin
Load many employees at once from a spreadsheet	**Administration › Data Management › Import Employee Data**	PnC Admin, Super Admin
See the history of everything done to one employee	**Administration › Audit Trail**	PnC Admin, Platform roles

Finance

I want to...	Go to	Who
Look someone up (team, type, joining date, exit date)	**People › Employees**	Fin Admin, Fin Ops
See who joined or is leaving this month	**Dashboard** → *At a glance*	Fin Admin, Fin Ops
See exits waiting for full-and-final	**Dashboard** → *Settlements due*, or **Offboarding** → *F&F Pending* tab	Fin Admin
Clear the Finance No Dues for an exit	**Offboarding** → *Manage Case* → **Departmental NDC**	Fin Admin
Record a full-and-final settlement	**Offboarding** → *Manage Case* → **F&F Settlement** → *Update Settlement*	Fin Admin
Read an offer or appointment letter	**People › Letters › Issued Letters**	Fin Admin
Download a headcount list	**Insights › Reports** → *Headcount & Demographics* → *Export CSV*	Fin Admin
Give a colleague a Finance role	**Administration › Users & Roles**	Fin Admin
Run payroll	*Not built yet.* See the Finance guide.	—

Leadership

I want to...	Go to	Who
Headcount, onboarding, confirmations, appraisal cohorts	**Insights › Reports**	Exec View
Every review in progress, and who is stuck	**People › Reviews**	Exec View

I want to...	Go to	Who
Look up an employee	**People › Employees**	Exec View

Platform team

I want to...	Go to	Who
Change review timings, reminder cadence, confirmation periods	**Administration › Settings**	Platform Admin
Check whether emails were sent or failed	**Administration › Email Center** → *Delivery Monitor & Outbox*	Platform Admin
Edit the self-reflection, peer or manager review questions	**Administration › Form Builder**	Platform Admin
Add a department, location or employment type	**Administration › Data Management**	Platform Admin, PnC Admin

Still can't find it?

- Check the **sidebar**. If the item isn't there, your role doesn't include it.
- Check the **Dashboard** tiles. Most tiles open the exact screen where that work happens.
- Check Known limitations. Some actions aren't built yet and are done outside the platform for now.
- Ask the right person (see the table at the end of the FAQ).

4. My Workspace

> **In this chapter.** The screens every staff member has: the Dashboard, your profile, your forms, your reviews, and (if people report to you) your team. If you only ever use the platform to take part in reviews, this is the only chapter you need after *Getting started*.

These screens are about **you**. Every staff member has them.

Dashboard (/)

Your home page. It opens with a greeting and a one-line focus for your role, followed by two parts.

Waiting on you

Your to-do list. When it's empty you see *"You're all caught up — nothing is waiting on you."*

List	What's in it
Forms to fill in	Forms you haven't started or haven't finished. *View all* opens My Forms.
Feedback you've been asked for	Peer feedback someone has nominated you for.
Decisions for your team	"Confirm *name*": a probation decision for someone who reports to you. Only shown to roles that can open Confirmations.

At a glance

Number tiles. Click a tile to open the screen where that work is done. Each role sees different tiles:

Role	Tiles
Super Admin	Active employees · In the pipeline · Open confirmations · Exits in progress · Failed emails · Settings changes
PnC Admin	Documents to verify · Joining in 14 days · Open confirmations · Exits in progress · Active employees
PnC Ops	Documents to verify · Joining in 14 days · Feedback to chase · Exits in progress
Fin Admin	Joined this month · Leaving this month · Settlements due · Active employees
Fin Ops	Joined this month · Leaving this month · Active employees
Exec View	Active employees · Joined this month · Leaving this month · Open confirmations
Platform Admin	Failed emails · Settings changes (last 7 days)
Manager	Direct reports · On probation

Role	Tiles
Employee, Platform Ops	*(no tiles)*

My Profile (`/profile`)

Your employment record, **read-only**:

- Name, role, employment type, email, team.
- **Employment Status**, **Department**, **Joining Date**.
- **Confirmation Status**: *Confirmed (date)* or *In Probation*.
- **Reporting Manager**: who you report to. Only PnC (PnC Admin, PnC Ops, Super Admin) can change it.
- **Direct Reportees**: the people who report to you, if any.

To correct anything (phone, address, emergency contact, a wrong manager), ask PnC. Employees can't edit their own details on the platform yet.

If you see **"Employee Record Not Linked"**, your Google login doesn't match the email on your employee record. Ask PnC to fix the email on your record.

My Forms (`/my-forms`)

Every form you've been asked to fill in: your self-reflection, peer feedback for a colleague, a manager review for your report, or any other form PnC has sent you.

- Tiles: **Total Forms**, **To Complete**, **In Progress**, **Submitted**.
- Search, and filter by status (*Not Started, In Progress, Submitted, Closed*).
- Click **Open**, **Continue** or **View**.

Inside a form:

- Fields marked * are required when you submit.
- Some questions appear only after you answer an earlier one.
- **Save draft** keeps your answers so you can come back later.
- **Submit** sends the form. **After you submit, you can't change it.**
- If a form has expired or been cancelled, the page tells you so. Ask PnC to send it again.

My Reviews (`/my-reviews`)

Where you follow your own **confirmation** (end of probation) and **appraisal** reviews and, if you're a manager, your team's.

My reviews

Each review shows its type, period, due date and your next step, for example:

- *Nominate your peers and fill in your self-reflection*
- *Your peers and manager are responding*
- *Everything is in; the meeting is being set up*
- *Meeting booked*
- *With PnC*
- *Completed*

You can see **who has responded, but not what they wrote.** You won't see your manager's review or the decision on screen either. PnC will get in touch with the outcome.

Your part in a review:

1. Open the review.
2. **Nominate peers.** Search with *Add a colleague*, add 4–5 people (not yourself, not your manager), then click **Save nominations**.
3. Click **Fill in my self-reflection**. The form opens in My Forms; fill it in and submit.
4. Your peers get their forms once your self-reflection is in. **After that your nominations are locked.** To add someone, ask PnC.
5. Go to the meeting. Once it's booked, you can move it from the review page if you need to.

The full process is in Confirmations, appraisals and reviews.

My team's reviews (managers)

If people report to you, a second list shows their reviews. For each one you:

1. **Fill in the manager review** (the form is in My Forms).
2. Read their self-reflection and peer feedback. Peer feedback appears **without names**, and only once at least two peers have answered.
3. Hold the review meeting. The platform books it automatically, and you can move it.
4. **Record the decision** after the meeting, with a note on what was discussed. It goes to PnC to accept.

My Team (`/my-team`)

Appears once at least one person reports to you.

- Tiles: **Direct Reports**, **Confirmed / Active**, **Probation Reviews**.
- A list of your reportees with role, type, department, joining date and status. Search, and filter by *Active* or *Probation*.

> The *Confirmations* and *New Confirmation* buttons on this page only work for roles that can open Confirmations. If they send you back to the Dashboard, work from **My Reviews** instead.

Worked example: Asha's confirmation, from her side

Asha is a fictional employee, used for illustration.

1. Seven days before her probation ends, Asha gets an email: "*Your confirmation review is due — self-reflection and peer nominations.*"
2. She opens **My Reviews**, clicks the review, and adds five colleagues she has worked closely with. She can't pick her manager, because the manager gives a separate review. She clicks **Save nominations**.
3. She clicks **Fill in my self-reflection**, answers over two sittings using **Save draft**, then **Submits**. Her nominations lock and her five peers are emailed.
4. Over the next week her review page shows peers moving from *Waiting* to *Submitted*. She can see **who** has answered, never **what** they wrote.
5. A calendar invite arrives for a 30-minute meeting with her manager and PnC. The time clashes with a class, so she opens the review and uses **Reschedule and re-send invite**.
6. After the meeting the review shows *With PnC*, then *Completed*. PnC contacts her with the outcome. Her **My Profile** then shows *Confirmed (date)*.

Good practice

- **Fill in forms before the due date.** Reminders go out every 24 hours, and after two reminders PnC is told.
- **Choose peers who actually saw your work**: four to five, from different teams if you can.
- **Write peer feedback you'd stand behind.** It's anonymous to the employee but not to the system.
- **Managers:** submit your manager review early. The meeting can't be booked until it's in.

5. Onboarding and letters

> **In this chapter.** The full path from "we want to hire this person" to "they have an official NavGurukul account": creating the candidate, what the candidate does in their portal, how PnC verifies and approves, what happens after joining, and how letter templates and signatories work.
>
> **Main users:** PnC Admin (offers, letters) and PnC Ops (the day-to-day pipeline). Fin Admin can read everything here but can't act.

For: PnC Admin, PnC Ops (and Fin Admin, read-only). **Sidebar:** People › **Onboarding** (Overview · Candidates · New Joiners) and People › **Letters** (Issued Letters · Templates · Signatories).

Onboarding takes a selected candidate all the way to an employee with an official NavGurukul account. It has two halves:

1. **Candidate onboarding** (before joining): offer, letters, portal, documents, verification, approval.
2. **Employee onboarding** (after joining): account setup, Day 1, orientation, POSH, 30/60-day check-ins.

The journey at a glance

#	Step	Who	Where
1	Create the candidate and the offer (CTC)	PnC Admin	*Candidates › Create Candidate*
2	Salary annexure and letters are generated	automatic	—
3	Invitation email with a personal portal link	automatic, or PnC	*Send Invitation*
4	Candidate fills in details, uploads documents, reads policies, signs letters, submits	Candidate	their portal link
5	PnC opens each document, verifies or rejects it	PnC Ops / Admin	*Review* → Verification
6	PnC approves the dossier	PnC Ops / Admin	*Approve Dossier*
7	PnC creates the official account, and **the candidate becomes an employee**	PnC Ops / Admin	*Create Official Account*
8	Day 1, orientation checklist, POSH, check-ins	PnC	*New Joiners*

Candidate statuses

Status shown	Meaning
Draft	Created; no invitation sent yet.
Invitation Sent	Email with the portal link has gone out.
In Progress	Candidate has opened the portal or started filling it in.
Submitted	Candidate clicked *Submit Onboarding to P&C*. **Your turn.**
Changes Requested	PnC asked the candidate to fix something.
Approved by P&C	Dossier approved; ready to create the account.
Official Account Active	Done. They are now an employee.

Onboarding › Overview (`/onboarding`)

A summary of the whole pipeline:

- Top cards: **Total In Pipeline**, **Pre-Joining Pipeline**, **Pending P&C Review**, **Post-Joining & Active**.
- **1. Candidate Onboarding** panel: counts at each stage (Draft, Invited, In Progress, Review), an **Action Required** strip when submissions are waiting, and shortcuts (Candidate Pipeline, Document Verification, Create Candidate Invite, Offer & Letters, ...).
- **2. Employee Onboarding** panel: IT Setup, Day 1, POSH, 30-60-90 counts and shortcuts.

> Some text on this page (e.g. "7-day token link", "Cadence Automations") describes features that aren't running. See Known limitations.

Onboarding › Candidates (`/onboarding/candidate`)

The list of every candidate.

- Click the cards (**Total**, **In Progress**, **Submitted for Review**, **Approved by P&C**) to filter.
- Search by name, role or email. Filter by team and status.
- Columns: candidate (an **Alumni** badge shows for NavGurukul alumni), role & team, joining date, **Dossier Progress %**, status.
- Row actions:
  - **Review** opens the candidate's review page.
  - ⋮ **› Copy Candidate Portal Link** copies their personal link.
  - ⋮ **› Preview Candidate View** shows what the candidate sees.
  - ⋮ **› Send / Resend Invitation Email**.

Creating a candidate (`/onboarding/candidate/new`)

PnC Admin and Super Admin only. The form includes the CTC, so it counts as salary work. PnC Ops can see the button but will be turned back.

Fill in five sections:

1. **Candidate Profile & Contact**: *Full Name**, *Personal Email** (the invitation goes here), phone, *NavGurukul Alumni* switch.
2. **Role, Department & Team Assignment**: *Designation**, *Employee Type**, department/team, campus/work location, reporting manager name, onboarding buddy name.
3. **Compensation, Joining Date & Terms**: *Joining Date**, *Monthly Compensation* or *Annual CTC**, probation period (*No Probation, 1 Month, 3 Months (Standard), 6 Months*), core responsibilities. Notice period is always 1 month.
4. **Letters & Document Generation**: pick a letter template and click **Use Template** to fill it in with this candidate's details. You can edit the text for this one candidate, preview it or download a PDF.
5. **Send Portal Invitation Email Immediately**: on by default.

Click **Save & Create Candidate**. The platform then:

- creates the candidate as **Draft**;
- sets up their document checklist and the 5 pre-joining policies;
- works out the **salary annexure** (Basic, HRA, Special Allowance, PF) from the CTC, using the rules for their employee type;
- generates the **Offer**, **Appointment** and **Acceptance** letters from the active templates;
- sends the invitation email, if the switch was on.

If the email fails you see *"Candidate created, but the invitation could not be sent..."*. Use **Send Invitation** from the review page to try again.

How the salary annexure is worked out

The platform works **backwards from the CTC** so the parts always add up to exactly the agreed figure:

- **Basic** ≈ 51% of gross, **HRA** = 40% of basic, **employer PF** = 12% of basic (capped). **Special Allowance** takes whatever is left over.
- Consultants, interns and contractors get a single flat figure: no HRA, no PF.

The split is a policy setting. Once letters are issued, they keep the figures they were issued with.

What the candidate sees: the portal (`/onboarding/<link>`)

The candidate doesn't sign in. They open their **personal link** from the email. The page says *"Candidate Onboarding — Welcome, {name}!"*, shows a progress %, and gives the PnC mailbox for help.

They can do the six steps in any order:

Step	What they do
1. Personal, Address & Emergency Contact	Legal name, address, emergency contact (required), plus DOB, gender, blood group, phone, current address.
2. Required Document Dossier	Upload each document (PDF/JPG/PNG/WebP, max 10 MB). Required by default: Resume/CV, passport photo, Aadhaar, PAN, address proof, highest education certificate, bank account proof. Optional: previous experience letter, relieving letter, references. If PnC rejected a file, the reason shows here as *P&C Feedback*.
3. Employment Terms & Role Acknowledgment	Check designation, team, joining date, manager, probation and notice period, then **Confirm & Continue**, or **Request Correction** with a note.
4. Pre-Joining Policies & Handbook	Read and **Mark as Read**: About NavGurukul, Code of Conduct & Safeguarding, Employee & Consultant Handbook, Leave & Attendance, Information Security & Data Privacy.
5. Offer & Appointment Letter	View *Annexure A* (salary breakdown), preview each letter, and **Sign**: draw a signature, type their legal name, tick consent, **Confirm & Affix Signature**.
6. Final Submission	**Submit Onboarding to P&C**. The button unlocks only when details, required documents, terms, all policies and all letters are done; anything missing is listed.

The link stops working once onboarding is complete or the candidate is withdrawn. It doesn't expire by date.

> **Heads-up for PnC:** a *Request Correction* from the candidate is only recorded in the audit log; **no email reaches PnC.** Check candidates in *In Progress* now and then.

Reviewing a candidate (`/onboarding/review/<link>`)

Open it from **Candidates → Review**.

Top strip: status, dossier progress, number of portal visits, first visit and last active.

Buttons (they change with the status):

- **Candidate Form** shows the portal as the candidate sees it.
- **Send Invitation / Resend Link**.
- **Request Changes** and **Approve Dossier**, when the dossier is submitted.
- **Create Official Account**, when it's approved.

Tabs:

Tab	What you do there
Personal Details	Read what the candidate entered.
Employment & Terms	Read role, dates and CTC.
Verification (x/y)	For each document: **Open** (a secure link, valid 10 minutes), then **Verify** or **Reject**.

Tab	What you do there
Pre-Joining Policies	See which policies are read.
Letters & Annexure	Annexure A and the letters, with signed time and signer.
Final Review	A checklist before approving.
Audit & Visits	Timeline of everything the candidate, PnC and the system did.

Verifying a document

1. Click **Open** and check the document.
2. Click **Verify**. Optionally type the **document number** (e.g. the PAN). Only its **last 4 characters** stay visible on the platform.
3. Click **Verify and secure**. The file moves into the **vault**, the locked store, and is removed from the platform's working storage. **This can't be undone.** You'll see *"Secured in vault"*.
   - If the move fails you see a *"Still in core"* warning with **Retry**.
4. To reject, click **Reject**, write the reason (*Rejection Feedback / Notes*), and **Confirm Rejection**. The candidate sees your reason on their portal and can upload again. **No email is sent**, so let the candidate know.

Approving and creating the account

1. When everything is verified, click **Approve Dossier** (or **Approve Onboarding Dossier** on the *Final Review* tab).
2. Click **Create Official Account** → **Confirm & Provision Account**. The platform:
   - refuses if any **required** document isn't verified;
   - gives them their official email (`firstname.lastname…@navgurukul.org`) and the next employee code (`NG-YYYY-NNNN`);
   - creates their **employee record**, copying personal details, the salary structure and documents across;
   - books their 30-day and 60-day check-ins;
   - marks the candidate **Official Account Active**.

> **Do this by hand afterwards.** The platform doesn't create the Google Workspace account or send login details. It only records them as pending. Day-1 emails, Slack invites and induction invites are still sent by the old Google Apps Script.

Onboarding › New Joiners (`/onboarding/employee`)

Everyone approved, being set up, or recently joined.

- Cards: **Post-Joining Total**, **Pending Account Setup**, **Active In Orientation**, **Probation Check-ins Due**.
- Tabs: **All**, **Account Setup**, **Day 1 & Orientation**, **Training & POSH**, **Probation Check-ins**.

Actions per person:

- **Set Up / Edit Account**: official email and permanent employee ID.
- **Orientation Checklist**: tick off welcome kit, laptop, Slack and system access, buddy intro, manager 1-on-1, P&C induction and POSH training. Ticking sends no emails.
- **POSH › Mark Done**.
- **30-Day Check-in / 60-Day Review**: set status (*Pending, Scheduled, Completed / Confirmed*), date, time, reviewer and notes.
- **View Complete Dossier** and **View Audit Trail**.

> The hardware panel and the manager's calendar used for check-in slots show placeholder data, and check-ins don't send calendar invites yet.

Letters

Templates (`/manage/letter-templates`)

The master wording for each kind of letter. PnC Admin edits them; Fin Admin can read them.

- Tabs: **Active**, **Archived**, **All**. Filter by letter type and employee type (Consultant, FTE, Intern, Apprentice).
- Actions: **Download PDF**, **Preview**, **Edit**, **Archive** / **Restore**.
- **Create Template** opens the editor:
  - Settings: *Letter Type* (Offer, Acceptance, Appointment, Confirmation, Role Change, Addendum), *Applicable Employee Type*, description.
  - **Add Section** blocks: Opening, Engagement Details, Role & Responsibilities, Terms of Engagement, Acceptance, Custom Rich Text.
  - **Variable Library**: click or drag placeholders such as `{{Full Name}}`, `{{Designation}}`, `{{Date of Joining}}`, `{{Annual CTC}}`, `{{Basic Pay}}`, `{{Notice Period}}`, `{{Authorized Signatory Name}}`. The platform fills them in for each candidate.
  - **Preview**, then **Save Template**.

Which template is used: the active template for the candidate's employee type; otherwise a general one for that letter type. If no active template exists for a letter type, that letter isn't generated. Letters that are already **signed are never regenerated.**

> Only **Offer**, **Appointment** and **Acceptance** letters are sent out through onboarding today. Confirmation, Role Change and Addendum templates can be written, but no screen issues them yet.

Issued Letters (`/manage/letters`)

Every letter generated for a candidate. Search by candidate, letter or type, then **View**, **Download PDF** or **Print**.

Signatories (`/manage/signatories`)

The people whose name and title appear as the signing authority on letters.

- **Add Signatory**: full name, official designation, optional email, and a signature (draw it or upload an image).
- **Set as Primary Default Signatory**: the default signatory is the one letters use.
- **Active Authority** switches a signatory on or off.

> Letters show the default signatory's **name and title**. The signature image isn't placed on letters yet.

Employee documents (`/employees/<id>/documents`)

The compliance file for an existing employee (PnC Admin, PnC Ops).

- Shows how many required documents are uploaded and which are missing.
- **Upload Employee Document**: choose the category (this decides the Google Drive folder: *Team Member* or *Verification Docs*), attach a PDF/JPG/PNG (max 10 MB) and click **Upload Document**.

Worked example: hiring a new programme associate

All names are fictional.

1. **Day 0, PnC Admin. Candidates › Create Candidate.** Fills in Ravi Kumar, his personal email, *Programme Associate*, FTE, joining on the 1st, annual CTC, *3 Months (Standard)* probation. Picks the FTE offer template, clicks **Use Template**, checks the preview, leaves *Send Portal Invitation* on, and clicks **Save & Create Candidate**. → Ravi appears as *Invitation Sent*, with the annexure and three letters generated.
2. **Days 1–5, Ravi** (portal link): fills in his details, uploads Aadhaar, PAN, degree certificate, photo, address proof, resume and a cancelled cheque, reads the five policies, signs the offer and appointment letters, and clicks **Submit Onboarding to P&C**. → *Submitted*; **Pending P&C Review** goes up by one.
3. **Day 6, PnC Ops.** Opens **Review → Verification**. Opens and verifies each document, typing the PAN number (only the last four characters stay on the platform). The address proof is blurry, so they **Reject** it with *"Please upload a clearer copy, all four corners visible"*, and **message Ravi themselves**, because no email goes out on a rejection.
4. **Day 7, Ravi** re-uploads. **PnC Ops** verifies it.

5. **Day 7, PnC Ops. Approve Dossier**, then **Create Official Account → Confirm & Provision Account**. → Ravi gets an official email and employee code, appears in **Employees**, and his 30/60-day check-ins are booked.
6. **Day 7, by hand.** IT creates the Google Workspace account and sends the login details. The Apps Script sends the Day-1 email.
7. **Day 1 onwards, PnC. New Joiners**: tick the orientation checklist, mark POSH done, record the 30- and 60-day check-ins.

Good practice

- **Verify documents within a few days of submission.** Until verified, the scans sit outside the vault (see Data privacy).
- **Always write a clear rejection reason.** The candidate sees exactly what you type.
- **Check the letter preview before saving the candidate.** Letters are generated straight away, and a signed letter is never regenerated.
- **Keep templates per employee type** (FTE, intern, consultant…) so the right wording is picked automatically.
- **Look at *In Progress* candidates weekly.** Correction requests from the portal don't reach PnC by email.

6. Employee directory and profiles

> **In this chapter.** The employee directory: how to find people, what each role sees on a profile, where documents live, and how team, manager and status changes reach a record. The directory is the platform's single record of who works here. Payroll, reviews and reports all read from it, so keeping it accurate matters.

For: Super Admin, PnC Admin, PnC Ops, Fin Admin, Fin Ops, Exec View. **Sidebar:** People › **Employees** (`/employees`).

Managers and employees don't get the directory. Managers see their own people under **My Team**.

The directory

Two tabs:

- **Active Employees**: name and email, employment type, team, tenure ("Since *date*"), status, and links to **View** (profile) and **Documents**.
- **Exited Employees**: the same, plus joining date and exit date. Anyone whose exit is closed in Offboarding moves here.

Finding people: search by name, team or employment type, then filter by **Type**, **Team** and **Status** (*Active / Confirmed*). Click a column header to sort. **Clear** resets the filters.

Exporting: the directory itself has no export button. For a CSV, use **Reports › Headcount & Demographics › Export CSV** (Super Admin, PnC Admin, Fin Admin, Exec View).

An employee's profile (`/employees/<id>/profile`)

What you see depends on your role:

Role	You see
PnC Admin, PnC Ops, Super Admin	The full form: first/last name, phone, official and personal email, permanent and mailing address, emergency contact, address-proof and photo-ID type and number. **Save Profile Changes** saves edits.
Fin Admin, Fin Ops, Exec View	A notice: *"Personal details — ID numbers, addresses and contact numbers — are visible only to the employee and to People & Culture."*

Everyone who can open the profile also sees the **Employee Audit Trail**, a history of everything done to that person across onboarding, confirmation, appraisal and offboarding.

An employee's documents (`/employees/<id>/documents`)

PnC Admin, PnC Ops and Super Admin only. Finance and Exec View can see the *Documents* link, but opening it shows *"You do not have access to employee documents."*

See Onboarding › Employee documents.

Changing someone's team, manager or status

- **Team, manager, type, joining or confirmation date for many people at once:** use **Data Management › Import Employee Data** (see Administration).
- **A person's system role or department: Users & Roles**.
- **Confirmation date:** set automatically when PnC accepts a *Confirm* decision (see Reviews).
- **Exited:** set automatically when an offboarding case is closed (see Offboarding).

Keeping the directory accurate

The directory feeds everything else:

If this is wrong…	…this goes wrong
Reporting manager	Reviews go to the wrong person, or **never open** (no manager = no review)
Joining or conversion date	Confirmation and appraisal reviews open at the wrong time
Employee type	The wrong probation length, letter template and salary split
Team	Reports and the team filters are off
Email	The person sees *"Employee Record Not Linked"* and can't use My Forms or My Reviews

Good practice for PnC: after each batch of joiners, use the **Reviews** dashboard's *Due, not started* card to spot anyone with *No manager on record*, and fix them with a small import file (just `email` and `manager_email`).

7. Confirmations, appraisals and reviews

> **In this chapter.** How confirmations (end of probation) and appraisals (twice-yearly performance reviews) run: what is automatic, what each person does, what PnC watches on the Reviews dashboard, and which settings change the timings.
>
> **The short version:** the platform opens the review, collects a self-reflection, peer feedback and a manager review, books a meeting, and asks the manager for a decision, which PnC then accepts or sends back. People only have to do their own part when asked.

For: PnC, managers, leadership, and every employee being reviewed.

Two kinds of review run through the same process:

- **Confirmation**: the end-of-probation review. Do we confirm this person?
- **Appraisal**: the twice-yearly performance review.

Where each person works

You are…	Work from
The **employee** being reviewed	**My Reviews** and **My Forms**
A **peer** asked for feedback	**My Forms** (and the email)
The **manager**	**My Reviews** → *My team's reviews*
PnC running the process	**People › Reviews** (`/reviews`)
Leadership	**People › Reviews** (read-only) and **Reports**

> **Use Reviews / My Reviews.** The older **Confirmations** screens (`/confirmations`) are still there and kept in step, but the review cycle described below is the current, automated way of working. See The older Confirmations screens.

How a review runs, end to end

```
Opens ─► Self-review ─► Collecting reviews ─► Ready for meeting ─► Meeting scheduled ─► Decision wi
(auto)   employee        peers + manager       all in              invite sent          PnC accepts
         nominates,                                                                     sends back
         self-reflects
```

1. **The review opens on its own.** A job runs every morning (about 08:30 IST) and opens:

- a **confirmation** 7 days before it's due. The due date is the joining (or conversion) date plus the probation length for that employee type;
- an **appraisal** 14 days before the appraisal month, for everyone in that cycle's group.

A review **never opens for someone with no manager on record.** These people show under *Due, not started* until PnC fixes the manager.

2. **Emails go out.** The employee gets *"Your … review is due — self-reflection and peer nominations"*. The manager gets the manager-review form.
3. **The employee nominates 4–5 peers** (not themselves, not their manager) and **submits their self-reflection**. Nominations then lock.
4. **Peers are asked.** Each peer gets an email (*"Name has nominated you for peer feedback"*) and a form in My Forms.
5. **Reminders.** By default, anyone who hasn't responded gets a reminder every 24 hours, up to 2 reminders. After that PnC is told (*"Needs PnC: … review is stuck"*) and the person is flagged **Not responding**.
6. **Ready for meeting.** Once the self-reflection, the manager review and at least **60% of peers** are in, PnC is told.
7. **The meeting is booked automatically**: 30 minutes, in the first free slot between 10:00 and 17:00 IST, at least 2 working days ahead. One calendar invite goes to the manager, the employee and PnC. The manager or PnC can move it, and the employee can too once it's booked.
8. **The manager records the decision** after the meeting, with a note.
   - Confirmation: **Confirm**, **Extend probation** (with a new date), or **Do not confirm**.
   - Appraisal: **Exceeds**, **Meets**, **Needs improvement**, or **Below expectations**.
9. **PnC Admin closes it.** Either:
   - **Accept and close**: for *Confirm*, the employee's confirmation date is set to today. For *Extend*, the new date is recorded. Unanswered forms are withdrawn.
   - **Send back to the manager**, with a note. The review returns to the meeting stage and the manager is emailed.

What the employee sees: who has responded, never what they wrote, and not the decision. After the decision they see *"Your manager has recorded the outcome of your review and PnC will be in touch with the next steps."* **PnC then tells the employee.**

Who reads what: the self-reflection, manager review and peer reviews are visible to the **manager and PnC only**. Peer reviews show **without names**, and only once **at least 2** peers have answered.

> ⚠️ The meeting slot is chosen without reading anyone's real calendar yet. **Check that the booked time actually works**, and move it if not.

People › Reviews (`/reviews`): the PnC dashboard

Who: Super Admin, PnC Admin, PnC Ops, Exec View (read-only).

Buttons (PnC Admin, PnC Ops)

- **Remind all pending** nudges everyone who owes a form.
- **Run automation now** runs the morning job immediately: opens due reviews, sends reminders and escalates. It reports *"X opened · Y reminded · Z escalated to PnC"*.

Warnings at the top tell you if the automation is **switched off** in Settings, or if **no PnC mailbox** is set (notices then go to every PnC Admin).

Numbers

Up for review · Self-reflections in · Peer reviews (answered/asked) · Manager reviews in · Ready for meeting · Meetings booked · With PnC · **Not responding** (red when above zero).

The table

Filter by **type** (*Confirmations / Appraisals*) and **status** (*In progress / Finished / All*). Columns: Employee, Review, Manager, **Stage**, **Progress** (Self · Peers · Manager), Due.

Due, not started

People whose review is due but hasn't opened:

- **Start now** opens it by hand.
- **No manager on record**: set a manager first.
- **Overdue — start by hand**: more than 30 days late. The system won't open these on its own.

Coming up lists the reviews that will open soon.

One review (`/reviews/<id>` , also `/my-reviews/<id>`)

The same page for everyone; each person sees only their part.

Section	What's there	Who can act
Stepper	The stage, manager, due date	—
Your part	Nominate peers, *Fill in my self-reflection*	Employee
Who has responded	Each reviewer, form, status, due date, reminders sent. **Remind** per person (once every 24h). **Remind everyone pending. Withdraw** a peer.	PnC; manager and employee can remind
Add a peer reviewer	Add someone after nominations locked. They get the form straight away.	PnC Admin, PnC Ops

Section	What's there	Who can act
Review meeting	**Book and send invite** / **Reschedule and re-send invite**	Manager, PnC; employee can move it
Reviews	The written self-reflection, manager review and anonymous peer reviews	Read by manager and PnC
Decision	Pick the outcome, write *why*, **Record decision and send to PnC**	Manager (or PnC Admin)
PnC note	**Accept and close** / **Send back to the manager** (note required)	PnC Admin, Super Admin
Timeline	Every step: opened, forms sent and submitted, reminders, escalations, meeting, decision, closed	Manager, PnC
Cancel this review	Give a reason and cancel	PnC Admin, PnC Ops

Appraisals (`/appraisals`)

Who: Super Admin, PnC Admin, Fin Admin, Exec View, Manager.

A **read-only** list of who falls into which appraisal cycle:

- Cards: **Eligible Cohort**, **July Cycle**, **December Cycle**.
- Tabs: *All Cycles* / *July* / *December*. Search, filter by type, sort by date.
- Columns: employee, type, cycle, **reference eligibility date**.
- **Appraisal Report** opens the Reports page.

Who is eligible (default): FTE and FTC from 6 months after joining; interns from their conversion date; apprentices and contractors are not eligible. PnC can change this in Settings › Appraisal.

The appraisal reviews themselves are run from **Reviews** and **My Reviews**, as described above.

Settings that control reviews

These are in **Administration › Settings** (Platform Admin edits them; PnC Admin can read them).

Tab	What it controls
Confirmation	Probation length per employee type (defaults: non-tech apprentice 1 month, tech apprentice 2, intern/FTE/FTC 3) and whether it counts from the joining date, the conversion date, or manually. *Manual* means the review never opens on its own.
Appraisal	Who is eligible and from when; the two cycles (month and which joining months fall in each).
Peer Feedback	Minimum and maximum peers; the **response-rate red-flag threshold** (default 50%); **red-flag keywords** to watch for in feedback.

Tab	What it controls
Reviews	Turn the daily job on/off; auto-book the meeting on/off; % of peers needed before the meeting (60%); PnC mailbox; how early reviews open (7 / 14 days); time to respond (self 5, peer 7, manager 7 days); gap between reminders (24h) and reminders before PnC is told (2); meeting length (30 min) and earliest slot (2 working days).

The **questions** on the self-reflection, peer and manager forms are edited in **Form Builder** (see Administration).

The older Confirmations screens

Who: Super Admin, PnC Admin, PnC Ops, Exec View (read-only), Manager.

`/confirmations` (**Employee Confirmations**) is the earlier, mostly manual version. It still works, and the new review cycle keeps its records up to date.

- Cards: Total Reviews, Approved, Pending Decision, Under Review.
- Search and filter by status, type (FTE / FTC / Intern / Apprentice) and sort.
- Per row: **Report** (compiled feedback) and **Manager Decision**.
- **New Confirmation**: pick the employee, the timeline and 4–5 peers, then **Launch Confirmation**. This emails the peers a feedback link and the employee a self-feedback request.
- **Manager Decision**: *"Is the employee ready for confirmation?"* Yes, or No with a reschedule date. Only the reporting manager or PnC can save it.
- **Report** (*Compiled Feedback*): who was nominated and who responded, anonymous written feedback, and a **Red Flag** banner if the response rate is low or a flagged keyword appears. PnC Admin can **Approve & Complete Confirmation**, which sets the confirmation date.

The decision options differ from the new flow (Yes / No-reschedule here; Confirm / Extend / Do not confirm there). Prefer the new flow.

After the review closes

The written feedback is meant to move ("seal") into the **vault** within 30 days of the review closing. After that only a record of who responded and the decision stays on the platform. See Data privacy and the vault.

Worked example: one appraisal cycle, from PnC's side

1. **14 days before the cycle month**, the morning job opens a review for everyone in the cohort. The **Reviews** dashboard fills up, all at *Self-review*.
2. **First week.** PnC watches *Self-reflections in*. Three people show under *Due, not started* with *No manager on record*. PnC fixes their managers with an import and clicks **Start now** on each.

3. **Second week.** *Not responding* shows 6. PnC opens each review, checks who is stuck, and either reminds them or **withdraws** a peer who is on leave and **adds** another.
4. **As each review reaches *Ready for meeting***, a meeting is booked. PnC checks the slots, because calendars aren't read yet.
5. **After the meetings**, managers record decisions and the reviews show *Decision with PnC*. PnC Admin reads each note and clicks **Accept and close**, or sends one back asking for more detail.
6. **Leadership** follows the cycle from the same dashboard and the **Reports** page.

Good practice

- **Check the dashboard daily during a cycle.** *Not responding* and *Due, not started* are the two numbers that need action.
- **Use *Run automation now*** after fixing data (e.g. adding managers), so you don't have to wait for the next morning.
- **Don't edit a live form mid-cycle.** In Form Builder, publish a new version between cycles. Forms already answered keep their version.
- **Tell the employee the outcome promptly.** The platform deliberately doesn't show it to them.

8. Offboarding and exits

> **In this chapter.** What happens from the moment someone resigns to the day their exit is closed: reviewing the resignation, the retention window, the exit checklist, asset return, the four-department No Dues sign-off, the full-and-final settlement, and closing the case.
>
> **Main users:** PnC (whole process) and Fin Admin (Finance No Dues and F&F).

For: Super Admin, PnC Admin, PnC Ops, Fin Admin. **Sidebar:** People › **Offboarding** (`/offboarding`).

Managers and employees can't open this screen. PnC records the manager's decision and the employee's choices on their behalf.

The **Offboarding & Separation Hub** works in two stages:

```
Stage 1: Resignation & Retention Window          Stage 2: Active Offboarding & Clearances
─────────────────────────────────────────        ──────────────────────────────────────────

Resignation in ─► Manager + PnC review ─► ─►      Initiated ─► Notice Period ─► Clearances ─► NDC Si
                  accept / retain / hold
```

Stage 1: Resignation & Retention Window

Recording a resignation

Click **Initiate Resignation** and choose where it came from:

- **Platform Portal**
- **Ingest Email**: paste the sender, subject and body of the resignation email as evidence
- **P&C Intake**

Fill in: employee, resignation date, notice period (days), proposed last working day (LWD), primary reason, details, and the employee's comments. Then click **Submit for Review**.

Reviewing it

Tiles and tabs: *All / Pending / On Hold / Retention Proposed / Disagreements / Accepted / Withdrawn*. Filter by source and department.

Review Request opens two panels, **Reporting Manager Review** and **People & Culture (P&C) Review**. Each has notes and three buttons:

- **Accept Resignation**
- **Propose Retention**
- **Put on Hold (7d)**

What happens next:

Manager	PnC	Result
Accept	Accept	Resignation accepted. **An offboarding case is created automatically** (Stage 2).
Retain	Retain	The employee is asked. PnC records *Employee Accepts Withdrawal (Stay)* or *Employee Declines (Proceed with Exit)*.
They disagree		PnC resolves it: *Accept Resignation & Initiate Exit* or *Propose Retention to Employee*.

The employee gets a resignation acknowledgement email.

Stage 2: Active Offboarding & Clearances

Tabs: *All Cases / Notice Period / Clearance / F&F Pending / Completed*. Filter by exit type (Resignation, Immediate Relieving, Termination, Mutual Separation, Contract End), department, or search.

- **Manage Case** opens the case.
- **Send Reminders** emails the employee about clearances still pending.

The case page

At the top: a countdown to the **last working day**, **Adjust Last Working Day** (proposed date, actual date and a reason), and **Complete Exit & Mark Exited**.

Progress: **1. Initiated → 2. Notice Period → 3. Clearances → 4. NDC Sign-Off → 5. F&F Settlement**.

Tab	What you do
Overview & Timeline	Terms, a clearance health check, the activity log.
Exit Checklist	Tick off and add notes: Knowledge Handover (employee), Manager Handover Acceptance (manager), IT Asset & Hardware Return Inspection (IT), Exit Interview & Feedback (employee), Expense Claims & Financial Dues Verification (finance).
Asset Clearances	Each asset: *Pending Return, Returned & Inspected, Cleared, Damaged, Under Recovery, Waived / Gifted*; record condition and any recovery amount (₹). Once every asset is cleared, IT's clearance is marked cleared.
Departmental NDC	The **No Dues Certificate**, signed off by four departments: Reporting Manager, IT & Asset Operations, **Finance & Accounts**, People & Culture. Each is *Pending, Under Review, Cleared (Approved)* or *Blocked / Exception* (with a reason). When all four are cleared, F&F moves to *Computation Pending*.
F&F Settlement	The full-and-final, edited by **Finance**. See below.
Documents & Closure	**Generate / Preview** the No Dues Certificate and the Relieving & Experience Certificate, **Print / Save as PDF**, then **Confirm & Execute Final Exit Closure**.

Full-and-final (F&F) settlement

Update Settlement records:

- status: *Awaiting Clearance → Computation Pending → Under Review → Processing Disbursement → Processed & Paid* (or *Blocked*);
- payable days, leave encashment days, asset and other deductions;
- the bank **UTR** and remarks.

Only roles that may edit salary can save it: **Fin Admin, PnC Admin, Super Admin**. PnC Ops sees the status but no amounts.

With the default settings, **F&F can't be marked processed until all four No Dues departments have cleared.**

Closing the exit

Confirm & Execute Final Exit Closure works only once every asset and every NDC department is cleared. It:

- sets the employee to **Exited**, with an exit date (they move to the directory's *Exited Employees* tab);
- emails the relieving letter.

Settings

Administration › Settings › Offboarding sets the defaults: notice period (30 days), F&F timeline (30 days after LWD), retention hold (7 days), clearance reminder frequency (every 2 days), manager escalation (5 days before LWD), and three rules: *complete No Dues before F&F*, *assets returned before closure*, *allow immediate relieving / notice waiver*.

> ⚠️ **Before relying on this module, read Known limitations › Offboarding.** Parts of it can show sample cases, and the asset, attendance and leave panels use placeholder data.

Worked example: a resignation with a 30-day notice

1. **Day 0.** An employee emails their resignation. PnC Ops clicks **Initiate Resignation**, chooses **Ingest Email**, pastes the email, fills in the dates (notice 30 days) and **Submits for Review**.
2. **Days 0–2.** PnC talks to the manager and records both reviews. Both click **Accept Resignation**, and an offboarding case is created automatically.
3. **Notice period.** PnC works the **Exit Checklist**: knowledge handover, manager acceptance, IT asset inspection. IT records the laptop as *Returned & Inspected*, then *Cleared*.
4. **Week before the LWD.** Each of the four departments clears its **No Dues**. Finance holds theirs at *Blocked / Exception* for an open advance, then clears it once it's recovered.
5. **After the LWD.** Fin Admin opens **F&F Settlement**, records payable days, leave encashment and deductions, and moves the status through to *Processed & Paid* with the UTR.
6. **Closure.** PnC generates the No Dues Certificate and the Relieving & Experience Certificate, then clicks **Confirm & Execute Final Exit Closure**. The employee moves to *Exited* and gets the relieving letter by email.

Good practice

- **Record the resignation the day it arrives**, so every date (notice, LWD, F&F target) is computed from the right starting point.
- **Use *Adjust Last Working Day*** for any change, with a reason. Don't close and reopen a case.
- **Write a reason whenever you block a clearance.** The next person needs to know what's outstanding.

9. Reports and audit trail

> **In this chapter.** The organisation-wide numbers on the Reports page, what each CSV export contains, and where to look when you need to know *who did what, and when*.

Reports (`/reports`)

Who: Super Admin, PnC Admin, Fin Admin, Exec View. **Sidebar:** Insights › **Reports**.

Reports & Analytics has five tabs. **Export CSV** downloads whichever tab is open (`pnc-report-<tab>.csv`).

Tab	What it shows
Appraisals & Cohorts	Total eligible staff, the July mid-year and December year-end cycles, a bar chart by team, and a table of each team's split between the two cycles.
Confirmations & Probation	Reviews started, confirmed, still pending, and the resolution rate. A table of each employee with status and manager decision.
Onboarding Pipeline	Total in pipeline, pre-joining candidates, post-joining employees, and the share submitted for review.
Headcount & Demographics	Active headcount, number of teams, campus locations and employment types, with share bars by type and by team. **The CSV has name, email, role, type, team, location and joining date: the usual headcount export.**
Email Delivery	Emails sent, delivered, queued, and the delivery success rate.

Some links inside reports lead to screens your role can't open (for example *Inspect* on the Onboarding tab for Exec View). If you're sent back to the Dashboard, that's why.

Audit Trail (`/audit`)

Who: Super Admin, PnC Admin, Platform Admin, Platform Ops. **Sidebar:** Administration › **Audit Trail**.

The **Employee Audit Trail** lists every action that touched an employee across onboarding, confirmation, appraisal and offboarding: who did it, when, and how serious it was (*Info, Notice, Warning, Critical*).

- Filter by module, actor and severity, or search.
- **Refresh** and **Export CSV**.
- Opened from a person's profile, it shows only that person.

The same history also appears at the bottom of each **employee profile**.

Other logs

Log	Where	What
Settings changes	Settings › **Audit Log**	The last 100 changes to platform settings, from old value to new, with who made them.
Role changes	Users & Roles → ⋮ → **View Audit Trail**	Who changed whose role or team, and why.
Emails	Email Center › **Delivery Monitor & Outbox**	Every email, with its status (*Delivered, In Queue, Failed, Bounced*).
Candidate activity	Candidate review page › **Audit & Visits**	Everything the candidate and PnC did, and every portal visit.

Which report answers which question

Question	Where
How many people work here, by team and type?	Reports › **Headcount & Demographics**
Who joined or left this month?	Dashboard tiles (Finance, Exec View)
How many people are mid-onboarding?	Reports › **Onboarding Pipeline**
How are probation confirmations going?	Reports › **Confirmations & Probation**, and People › **Reviews**
Who falls in the July vs December appraisal cycle?	Reports › **Appraisals & Cohorts**, or People › **Appraisals**
Did our emails go out?	Reports › **Email Delivery**, or Email Center › **Delivery Monitor**
Who changed this person's record, and when?	**Audit Trail**, or the bottom of their profile
Who changed this setting?	Settings › **Audit Log**
Who gave this person their role?	Users & Roles → ⋮ › **View Audit Trail**

Handling exports: CSV files leave the platform's protection. Keep them in restricted folders, and delete local copies when you're done.

10. Administration

> **In this chapter.** The screens that run the platform itself: user accounts and roles, settings, the Email Center, master data (departments, locations, employment types), the bulk employee import, and the Form Builder. Most people never need these. PnC Admin uses *Users & Roles* and the import. The Platform team owns the rest.

Sidebar: Administration › Users & Roles · Settings · Email Center · Data Management · Form Builder · Audit Trail.

Screen	Who can open it	Who can change things
Users & Roles	Super Admin, PnC Admin, Fin Admin, Platform Admin	Each admin only for their own team's roles
Settings, Email Center	Super Admin, Platform Admin, PnC Admin	Super Admin, Platform Admin. **PnC Admin is read-only.**
Data Management, Form Builder, Audit Trail	Super Admin, Platform Admin, Platform Ops, PnC Admin	Departments/locations/types: Super Admin, Platform Admin, PnC Admin. Import: Super Admin, PnC Admin.

PnC Admin sees a **"View-only access"** banner on Settings: *"Ask a Platform Admin to apply the configuration you need."*

Users & Roles (`/manage/users`)

Every person who can sign in, with their **team/department**, **system role** and status.

- Filter by role group (*PnC, Finance, Leadership, Platform, Line, Employee, Onboarding*), by team, or search.
- **Add User**: email, full name, role and team, then **Create User**. This sets the account up in advance. When the person first signs in with Google, their login is matched to it by email. **No email is sent**, so tell them.
- ⋮ **› Edit Allocations**: change the role and/or team, add an *Audit Note / Reason*, check the preview, then **Save Allocations**.
- ⋮ **› View Audit Trail**: the history of that person's role changes.

The Super Admin account is marked *Protected Root Account* and can't be edited. The rules on who may grant which role are in Roles and access.

Settings (`/manage/settings`)

Platform Settings & Governance has eight tabs. Each change is logged.

Tab	What's in it
General	Organisation name and email domain (fixed); default probation period and notice period (used on new offers); review meeting length; default work location.
Confirmation	Probation length and starting point per employee type; min/max/default peer reviewers.
Appraisal	Eligibility per employee type; the two appraisal windows.
Peer Feedback	Peer limits; response-rate red-flag threshold; red-flag keywords.
Reviews	The review automation: on/off, auto-booking, timings, reminders, PnC mailbox, meeting. See Reviews.
Documents	The list of document types candidates and employees upload: name, whether it's required, and where it's stored (*Team Member Folder* or *Verification Docs (Confidential)*). **Create New Document Type** adds one.
Offboarding	Notice period, F&F timeline, retention hold, reminder and escalation timings, and three clearance rules. See Offboarding.
Audit Log	The last 100 settings changes.

Email Center (`/manage/emails`)

Tab	What it's for
Templates & Cadence	One card per automatic email (17 in all, across Onboarding, Confirmation, Appraisal and Offboarding), with its trigger. You can edit the subject and body and preview them.
Delivery Monitor & Outbox	Every email sent: recipient, type, stage, date, status (*Delivered, In Queue, Failed, Bounced*). **Look here when someone says they never got an email.**
Email Setup Infrastructure	The sending provider and domain checks (SPF/DKIM/DMARC). Platform team only.
Daily Sending Quota & Volume	How much of the Google daily limit (2,000 emails) has been used.

> ⚠️ **Important:** the templates on this screen **don't yet control the emails that actually go out**. The real emails are built into the platform and are always sent through Google. *Resend* in the outbox marks the row as delivered but **doesn't actually send again**. See Known limitations.

The emails that are actually sent today

When	Email
Candidate created or invited	*"Welcome to NavGurukul — complete your onboarding"*, with the portal link
Review opens	Self-review due (employee); manager review form (manager)
Employee nominates peers	Peer feedback request (each peer)
Every morning	Reminders; *"Needs PnC"* escalation; *"Ready for meeting"* (PnC)
Meeting booked or moved	Calendar invite to manager, employee and PnC
Decision recorded / sent back	To PnC / to the manager
Old-style confirmation launched	Peer feedback request and employee self-feedback request; one reminder to peers the next morning
Resignation recorded	Resignation acknowledgement
Send Reminders on an exit	Clearance reminder
Exit closed	Relieving documents

Data Management (`/data-management`)

A hub with three groups.

Organization & Master Data

The lookup lists that drop-downs across the platform use:

- **Departments**: add (name, description, head of department), assign or change the HOD, archive or restore.
- **Locations**: add (name, type *Campus / Bootcamp / Day Center*, status, address), change type, close or reopen.
- **Employment Types**: add, archive or restore.

Import Employee Data

Use this to load or update many employees at once. **Super Admin and PnC Admin only.**

1. Click **Template** to download `employee_import_template.csv`.
2. Fill it in, in Excel or Google Sheets, then **save as CSV**. Only CSV is accepted, up to 2,000 rows.

Column	Notes
`email`	Required on every row. This is how people are matched.
`name`, `employee_type`, `joining_date`	Required for **new** people.
`employee_code`, `manager_email`, `team`, `status`, `confirmation_date`, `conversion_date`	Optional.

- Employee types: `fte`, `ftc`, `intern`, `apprentice_tech`, `apprentice_nontech`, `contractor`, `part_time`, `fellow`.
- Dates: `YYYY-MM-DD` or `DD/MM/YYYY`.
- `team` must match a department name exactly.
- **An empty cell keeps the current value.**
- **Don't put salary, bank or ID numbers in the file.**

3. Upload it. Nothing is saved yet; you get a **preview** showing each row as *New*, *Update*, *No change*, *Error* or *Warning*, with the reason. Common errors: a bad email, an unknown type, a bad date, an unknown team, an unknown manager, or someone set as their own manager. Common warning: *"No manager: their reviews cannot be sent until one is set."*
4. If there are errors, the button reads **Fix N rows to import**. Fix the file and upload again. When it's clean, click **Import: add N, update M**.

Every change is recorded in the person's audit trail. If an import stops halfway, upload the same file again to finish it. **There's no undo.** Double-check the preview.

Audits and Rollbacks

Onboarding Audit Logs and **System Audit Logs** show recorded activity.

> **Import History**, **Record History** and the **Rollback Center** currently show **sample data only**. They aren't connected to real records, so don't use them.

Form Builder (`/data-management/forms`)

Where the questions on every form are written: the self-reflection, peer review and manager review for confirmations and appraisals, and any standalone form.

- **Create Form**: a name and a workflow (*Confirmation, Appraisal*, or *Not linked (Standalone)*), then **Create & Open Builder**.
- Row actions: **Open Builder**, **Duplicate**, **Archive** / **Restore**.

In the builder:

1. Add **sections**, then add **fields** to them. Each field has a label, a type, help text and a *Required* flag. Field types: short text, long text, number, date, single select, multi select, yes/no, rating (1–5), rating

grid, employee picker.

2. A section can be set to **show only when** an earlier answer is chosen.
3. **Publish vN** makes that version live. A published version can't be changed; **Edit (creates a new draft)** starts the next version. Forms already filled in keep the version they were answered on.
4. **Send this form**: choose who fills it in, optionally who it's about, and how many days until it expires. It appears in that person's **My Forms** (no email is sent for this yet). Submitted answers are listed below.

Good practice for administrators

- **Always write a reason** when changing a role. It's what the audit trail shows later.
- **Remove access the day it's no longer needed.** When someone moves teams, change their role straight away.
- **Change settings between cycles, not during one.** Review timings apply to reviews already running.
- **Run an import on a small test file first** (two or three rows). There's no undo.
- **Archive, don't delete.** Departments, locations, employment types and forms can be archived and restored. History that points at them stays intact.

11. Finance guide

> **In this chapter.** Everything the Finance team needs in one place: your two roles, the screens you can open, your three regular tasks (joiners and leavers, exits and F&F, staffing your team), and a plain-language summary of the payroll design, which is **planned but not yet built**.

For: Fin Admin, Fin Ops.

This chapter covers what the Finance team can do on the platform **today**, and what is **planned** for payroll.

Your roles

	Fin Admin	Fin Ops
Employee directory (name, team, type, dates)	View	View
Personal details (phone, address, ID numbers)	—	—
Bank details	Edit	View
Salary	Edit	View (for payroll export)
Review outcomes (not the written feedback)	View	—
Vault login	Yes	Yes
Can give roles to	Fin Admin, Fin Ops	—

Screens you can open

Screen	Fin Admin	Fin Ops	What you use it for
Dashboard	✓	✓	*Joined this month*, *Leaving this month*, *Active employees*; Fin Admin also gets *Settlements due*.
People › Employees	✓	✓	Look people up; the **Exited Employees** tab lists leavers with their exit date.
People › Onboarding	✓ (read)		See who is joining and when. Action buttons are for PnC.
People › Appraisals	✓		See who is in the July and December cycles.
People › Offboarding	✓		**Finance No Dues** and the **full-and-final settlement**.
People › Letters	✓ (read)		Read issued offer and appointment letters (they include CTC).

Screen	Fin Admin	Fin Ops	What you use it for
Insights › Reports	✓		Headcount CSV, onboarding pipeline, appraisal cohorts.
Administration › Users & Roles	✓		Give colleagues Fin Admin or Fin Ops.

What Finance does today

1. Monthly joiners and leavers

- **Dashboard** → *Joined this month* / *Leaving this month*. Click a tile for the list.
- **Employees** → *Active* (filter by type or team) and *Exited* (with exit dates).
- **Reports › Headcount & Demographics › Export CSV**: name, email, role, type, team, location and joining date, to reconcile with the payroll sheet.

2. Exits: Finance No Dues and full-and-final (Fin Admin)

1. **Dashboard** → *Settlements due*, or **Offboarding** → *F&F Pending* tab.
2. **Manage Case** → **Departmental NDC** → set **Finance & Accounts** to *Cleared (Approved)*, or *Blocked / Exception* with a reason (e.g. an unsettled advance).
3. Once all four departments have cleared, **F&F Settlement** shows *Computation Pending*. Click **Update Settlement** and record:
   - payable days and leave encashment days;
   - asset and other deductions (IT records asset recovery amounts under *Asset Clearances*);
   - the status as you go: *Under Review* → *Processing Disbursement* → *Processed & Paid*;
   - the bank **UTR** and remarks once paid.
4. PnC closes the exit, and the relieving letter is emailed.

By default, **F&F can't be marked processed until all four No Dues departments have cleared.** The target is settlement within **30 days of the last working day** (Settings › Offboarding).

The amounts themselves are still calculated outside the platform for now.

3. Offer letters and salary structure

PnC Admin enters the CTC when making an offer, and the platform splits it into **Basic**, **HRA**, **Special Allowance** and **employer PF** (see Onboarding › salary annexure). Fin Admin can read the resulting letters under **Letters › Issued Letters**.

4. Staffing your team

Users & Roles → find the colleague → ⋮ **› Edit Allocations** → set *Fin Ops* or *Fin Admin* → add a reason → **Save Allocations**. You can't change your own role, or anyone in another team's role. **Vault access is a separate invitation** from the vault owner.

Payroll: what's planned

> **Status: design only. Nothing is built yet.** No payroll screen exists. Payroll won't be built until **Finance and P&C sign off** on the design (`docs/payroll/`).

What it replaces

Today payroll is computed in the 54-column *Personnel* Google Sheet: about 280–300 rows a month, formulas fixed by hand, events typed into a Remarks column, PF/ESIC/PT/TDS typed in, and `±CTC` rows for people split across projects.

Today (sheet)	Planned (ELC)
Formulas in cells, fixed by hand	One tested calculation. Results can't be edited, only **overridden with a reason**.
Events typed in Remarks	A fixed list of events, most produced by onboarding and offboarding
PF / ESIC / PT / TDS typed in	Calculated from dated rate tables
`±CTC` rows for split people	An allocation table: person × month × project × donor × %
Re-reading the sheet to check	Automatic checks: **BLOCK** (stops the run), **FLAG** (needs a reason), **CHECK** (needs a look). Then sign-offs and a lock.
Sheet history	Every change logged: who, when, before, after, why

The one rule

The platform holds the rules; the vault holds the money. Percentages, rate tables, events and run status live on the platform. Every amount (CTC, net pay, payslips, bank files) lives only in the **vault**, which only Finance, PnC Admin, leadership and the Super Admin can log in to.

The planned monthly cycle

1. **PnC** records events (joins, exits, conversions), verifies PAN / UAN / bank / state, imports attendance from **STUB**, and signs off payable days and leave without pay.
2. **Freeze date**: the month's inputs stop changing.
3. **Fin Ops (maker)** computes the run and resolves exceptions.
4. **Fin Admin (checker)** reviews it. Then the **approver** signs off. **Nobody signs two steps, and the maker signs none.**
5. The run is **locked**. A locked run never changes; corrections go into an adjustment run or next month.
6. Outputs: IDFC / SBI bank files, payment register, payslips, PF ECR, ESIC, PT and TDS files, accounting entries. Bank status is imported back.
7. **Full-and-final** settlements run off-cycle, within 2 working days of the last working day.

Phases

Phase	What	Done when
0: Foundations	Vault tables (Mumbai), moving the platform's data to Mumbai, NG employee IDs issued at pre-joining, a state on each location, salary split variations (Fin Admin edits, PnC Admin approves), moving all amounts out of the platform into the vault	A test person can be offered, onboarded and converted with no amounts outside the vault
1: Run and pay a month	Masters, rate tables, calculation, inputs, checks, sign-off and lock, payroll calendar, bank files, payslips, salary TDS, statutory files, F&F, totals views	**Two months in a row of shadow runs** matching the sheet with no unexplained differences. Then the sheet is retired.
2: Beyond the run	Consultant invoices, provisions, donor/project/FCRA reports, accounting entry export	—

Reimbursements stay outside payroll.

Decisions already taken (selection)

- Data stored in India (Mumbai).
- Salary components: **Basic, HRA and one allowance**.
- PF: 12% × min(Basic, ₹25,000), capped at ₹3,000.
- Consultant TDS: 10%. Employee TDS entered by hand at first.

What Finance still needs to provide

`docs/payroll/decisions.md` lists the inputs Finance owes (**F-01 to F-10**), including PT for Chhattisgarh and Bihar, PF opt-out records, the IDFC/SBI bank file and PF ECR formats, and the Tally/accounting entry format. Phase 1 can't start until F-01 to F-03 and F-08 to F-09 are in. Who the final **approver** is also hasn't been decided yet.

The full design is in `docs/payroll/`, with a glossary.

Month-end checklist for Finance (today)

1. **Dashboard:** note *Joined this month* and *Leaving this month*.
2. **Reports › Headcount › Export CSV.** Reconcile with the payroll sheet: new joiners added, leavers removed, type changes (e.g. intern → FTE).
3. **Employees › Exited:** confirm exit dates for anyone leaving this month.
4. **Offboarding › F&F Pending:** clear Finance No Dues and update each settlement.
5. **Users & Roles:** check that only current Finance staff hold Finance roles.

How Finance can help payroll arrive sooner

- Provide the **inputs still owed** (F-01 to F-10), especially PT rules for Chhattisgarh and Bihar, PF opt-out records, and the bank and ECR file formats.
- Name the **approver** for the sign-off chain.
- Plan for **two months of shadow runs**: the sheet and the platform run side by side until they match.

12. Data privacy and the vault

> **In this chapter.** Why the platform has two data stores, what goes in the locked one (the *vault*), how data moves into it ("sealing"), how much of that is built today, and what each of us is responsible for. Read this chapter if you handle salary, bank details, ID documents or review feedback.

Two stores

The platform keeps data in two separate places:

	The platform (also called *core*)	The vault
What's in it	Names, teams, dates, managers, statuses, workflows, settings, templates	Things that would harm a person if they leaked: **salary**, **bank details**, **government ID numbers and scans** (Aadhaar, PAN, UAN, passport), and **what colleagues wrote** in reviews
Who can log in	All staff (with Google)	**Only** Super Admin, PnC Admin, Fin Admin, Fin Ops and Exec View, by **separate invitation**
Can the tech team read it?	Yes	**No, never**
Where	—	India (Mumbai)

Every read from the vault is logged. Getting a role on the platform **doesn't give you vault access**. That's a separate invitation.

"Sealing": how data moves into the vault

Some sensitive data has to be worked on before it goes into the vault. PnC Ops has to check a document, and a manager has to read feedback during a review. That data starts on the platform and is **sealed** into the vault when the work is done:

What	Sealed when	Target
An ID document a candidate uploads	**PnC verifies it** (*Verify and secure*)	within 14 days
Written review feedback	**The review closes**	within 30 days

After sealing, the platform keeps only a trace: *that* it happened, who did it, when, and for a document the **last four characters** of its number. That is why PnC Ops can verify documents, and managers can read feedback during a review, **without a vault login**.

Until it's sealed, the tech team could technically read it. So:

- **Verify documents promptly.** Don't leave submitted dossiers waiting.
- **Close reviews** once the decision is made.

Today's status

Item	Status
ID documents sealed on verification	Built
Logged reading of salary and feedback from the vault	Built
Older peer-feedback sealing	Built, but nothing triggers it yet
New review-form answers and decision notes	**Still on the platform**, not yet sealed
Bank details entered straight into the vault	**Not built.** Bank proof is an uploaded document for now.
Salaries (CTC) stored in the vault	**Not built.** CTCs and letters are still on the platform, protected by role rules.
Payroll export	Not built

Your responsibilities

- **Only look at what your work needs.** The platform limits what you can see, but you're responsible for what you do with it.
- **Don't download or share** salary, bank, ID or feedback data outside the platform unless your process requires it.
- **If you can see something you think you shouldn't, report it** to a PnC Admin. That's treated as a defect, and it gets fixed.
- **Don't type salary, bank or ID numbers into free-text fields** (notes, reasons, comments) or into import files.
- **Peer feedback is anonymous** to the employee. Never pass on who said what.

Worked example: what happens to a PAN card

1. The candidate uploads a PAN card scan in their portal. It's stored on the platform, visible to PnC.
2. PnC Ops opens it, types the PAN number and clicks **Verify and secure**.
3. The scan and full number move into the vault. The platform now shows only *"Secured in vault"* and the last four characters, e.g. `••••••234F`.
4. From then on, only vault users (Super Admin, PnC Admin, Fin Admin, Fin Ops) can read the full number, and **each read is logged**.

13. Known limitations

> **In this chapter.** An honest list of what isn't finished, or behaves differently from what the screen suggests. Each item says what to do instead. This list will shrink with each release. Check the **Changelog** (`/changelog`) for what has changed since this guide was written.

What isn't finished yet, or behaves differently from what the screen suggests, as of version 2.04.00. **Read this before relying on a screen for real work.** Items are grouped by area.

General

- **Notifications** in the user menu doesn't open anything yet.
- **Help panel:** help text exists but there's no button in the header to open it.
- **Managers** aren't assigned the *Manager* role automatically. Most line managers are *Employee* and work from **My Team** and **My Reviews**. Buttons on My Team that lead to *Confirmations* send them back to the Dashboard.
- **Employees can't edit their own details** (phone, address, emergency contact). PnC edits them on the employee's profile.
- Some links lead to screens a role can't open (e.g. *Create Candidate* for PnC Ops, *Audit Logs* for Fin Admin, *Inspect* in Reports for Exec View). Clicking them sends you back to the Dashboard.

Onboarding

- **Only one onboarding email is sent: the invitation.** Nothing is emailed when a candidate submits, when a document is rejected, when changes are requested, or when they're approved or set up. **Contact the candidate yourself.**
- A candidate's **Request Correction** on the terms step is only recorded in the audit log; PnC isn't notified.
- **Create Official Account doesn't create the Google Workspace account or send login details.** Do this by hand. The email shown in the confirmation dialog may differ from the one actually assigned.
- **Day-1 emails, Slack invites and induction invites** still come from the old Google Apps Script, not from the platform.
- The **Letters & Annexure** tab on the review page may show placeholder text instead of the real letter. Use **Issued Letters** to read the real one.
- On the **Final Review** tab, approval doesn't require the checks to pass.
- Invitation links **don't expire by date**, despite "7-day token link" on the Overview.
- The candidate list's **team filter** is a fixed list, not the department list.
- The **hardware panel**, and the **manager calendar** used to pick check-in slots, show placeholder data. Check-ins don't send invites.
- The **signature image** on Signatories isn't printed on letters; only the name and title are.

- Only **Offer, Appointment and Acceptance** letters are issued. Confirmation, Role Change and Addendum letters can't be issued from a screen yet.
- There's no button to **withdraw** a candidate, or to delete a withdrawn candidate's documents.
- The IP address recorded with a candidate's signature is a fixed placeholder, not their real IP.
- Documents that were sealed into the vault on verification may not be copied into the employee's Drive folder when the account is created. Check the employee's **Documents** page.

Reviews and confirmations

- **Meeting slots are picked without reading real calendars.** Check the booked time and move it if needed.
- The daily job runs **once a morning**, so reminders aren't to the minute.
- The **older Confirmations screens** use different decision options (Yes / No-reschedule) from the new flow (Confirm / Extend / Do not confirm). Some text there (e.g. "15 Days Before Due", "Min. 3 Responses") is fixed and doesn't follow Settings.
- Accepting **Do not confirm** only closes the review. Nothing changes on the employee record, and the next step is up to PnC.
- The **Appraisals** page is read-only, its *Cycle Status* card always reads "Active Planning", and its footer text about which joiners fall in July doesn't match the actual settings.
- Written feedback from the new review flow is **not yet sealed** into the vault after closing.

Offboarding

- When the offboarding tables are empty or unreachable, the module shows **built-in sample cases and resignations**. Changes may not be kept, and real cases can sometimes fail with *"Case not found"*. **Check with the platform team that you're looking at real data before using it for live exits.**
- The **asset, attendance and leave** panels use placeholder data.
- The **exit interview** is only a checklist item; there's no interview form.
- The scheduled clearance-reminder job isn't switched on. Use **Send Reminders** by hand.
- Managers and employees can't use the screen; PnC records their responses.

Emails

- The **Email Center** templates don't control the emails actually sent. Real emails are built into the platform and sent through Google.
- **Resend** in the outbox doesn't send anything; it only marks the row.
- The note about batches "every 30 minutes between 09:00 and 19:00 IST" is wrong. Reminder jobs run once each morning.

Data Management

- **Import Employee Data** accepts **CSV only** (not XLSX), has **no undo**, and isn't listed in *Import History*.
- **Import History**, **Record History** and the **Rollback Center** show **sample data only**.
- **System Audit Logs** may show sample rows when the real log is empty.
- **Bulk Upload Users** isn't available.
- **Form Builder** *Send this form* doesn't email the person yet. It only appears in their My Forms.

Payroll and vault

- **Payroll isn't built.** See the Finance guide.
- Bank details aren't captured as data, only as an uploaded proof document.
- CTCs and letters are still held on the platform, behind role rules, until the vault work is done.

Reporting a new problem

When something doesn't work as this guide describes, send the Platform team:

1. **What you were trying to do**, and the page address.
2. **What you expected**, and **what happened** (with the exact message).
3. **Your role** (shown in the header), and whether you were in *Role View Mode*.
4. A screenshot **with any salary, bank, ID or feedback data covered**.

14. Glossary and FAQ

> **In this chapter.** Short definitions of the terms used in this guide and on the platform, then answers to the questions new users ask most.

Glossary

Term	Meaning
ELC	Employee Life Cycle: the whole journey from candidate to exit.
PnC / P&C	People & Culture, NavGurukul's HR team.
Core	The main platform database. Holds everything except the most sensitive data.
Vault	The separate, locked store for salary, bank, ID numbers and written feedback. Separate login; the tech team can't read it.
Sealing	Moving a document or feedback from the platform into the vault once the work on it is done.
Role	What you're allowed to see and do. Each person has one.
Role View Mode	Lets an admin see the site as a lower role would.
Candidate	Someone with an offer who hasn't accepted yet.
Pre-joiner	Someone who accepted and is completing documents before Day 1.
Portal / portal link	The candidate's personal onboarding page, opened from their invitation email. No login.
Dossier	Everything a candidate submits: details, documents, policy reads, signed letters.
Provisioning / Create Official Account	Turning an approved candidate into an employee with an official email and employee code.
Annexure A	The salary breakdown attached to the offer.
CTC	Cost to Company: the total annual compensation agreed in the offer.
Signatory	The person named as signing authority on letters.
FTE / FTC	Full-time employee / full-time consultant (on this platform).
Confirmation	The end-of-probation review that decides whether someone is confirmed.
Appraisal	The twice-yearly performance review (July and December cycles).
Cohort	The group of people who fall into one appraisal cycle.
Self-reflection	The employee's own form in a review.
Peer review	Feedback from colleagues the employee nominated. Anonymous to the employee.

Term	Meaning
Not responding	Someone who hasn't answered after the set number of reminders. PnC is told.
LWD	Last working day.
NDC	No Dues Certificate: sign-off from Manager, IT, Finance and PnC before an exit closes.
F&F	Full-and-final settlement: the leaver's final pay calculation and payment.
UTR	The bank's reference number for a payment.
STUB	NavGurukul's attendance system.
Maker / checker / approver	The three different people a payroll run must pass through (planned).

FAQ

I can't sign in. Use your **@navgurukul.org** Google account. Personal accounts are refused.

A page sent me back to the Dashboard. Your role doesn't include that page. If you need it for your work, ask your team's admin. See Roles and access.

My Profile says "Employee Record Not Linked". Your login email doesn't match your employee record. Ask PnC to correct the email on your record.

I don't see My Team. It only shows when at least one person has you as their reporting manager on record. Ask PnC to check the reporting lines.

I'm a manager and I can't open Confirmations. That's expected for most managers. Work from **My Reviews → My team's reviews**.

Can the employee see what I wrote in their review? No. They see who has responded, not what anyone wrote, and not the decision. Peer feedback is shown to the manager and PnC without names.

I nominated the wrong peer. Once your self-reflection is submitted, nominations lock. Ask PnC to add or withdraw a peer.

The meeting time doesn't work. Open the review and use **Reschedule and re-send invite**. The invite updates for everyone.

A candidate says they didn't get the invitation. Check **Email Center › Delivery Monitor & Outbox**. Then use **Resend Invitation Email** on the candidate, or copy their portal link and send it yourself. (*Resend* in the outbox doesn't send anything.)

Why can't PnC Ops make an offer? Making an offer means entering the CTC, which is salary data. Only PnC Admin and Super Admin can do that.

Why can't Finance see employees' addresses or ID numbers? The access rules give personal and identity details to the employee and PnC only. Finance sees what payroll and settlements need.

Can I undo an employee import? No. Always check the preview before clicking **Import**.

Where is payroll? Not built yet. See the Finance guide.

Who do I ask about…

Topic	Ask
Access, roles, employee records, onboarding, reviews, exits	PnC Admin
Finance roles, F&F, salary	Fin Admin
Settings, email problems, forms, something broken	Platform Admin
